

# What are the most types of cars getting rented? And from Where?

*By: Badar AL-Mahrouqi*

## **Introduction:**

The car rental industry is an essential component of the global transportation market, offering short-term vehicle leasing solutions for both personal and business use. It provides a convenient alternative to car ownership, serving tourists, business travelers, and individuals requiring temporary access to vehicles.

From a business perspective, car rental companies are influenced by demand fluctuations tied to tourism, corporate travel, and urban mobility trends. Profitability is driven by rental fees, add-on services like insurance and GPS systems, and new subscription options.

Success in this sector depends on efficient fleet management, strong customer service, and partnerships with travel aggregators.

### Project Objectives:

In this project, I will be investigating the following questions:

- 1- Which cars are most rented based on their type, model, make and year?
- 2- What are the top 5 states for car rentals?
- 3- Who are the top 5 car owners?
- 4- What are the distributions of the cars based on their fuel type? And which cars are getting more rented based on their fuel type?
- 5- Which is the top car type earning the most daily rate?
- 6- Show the car ratings.

### Analysis Methodology Used:

I build my analysis based on the Cross-Industry Standard Process for Data Mining (**CRISP-DM**) framework. This framework covers the following 6 phases:

- Business understanding
- Data understanding
- Data preparation
- Modeling
- Evaluation
- Deployment/communication

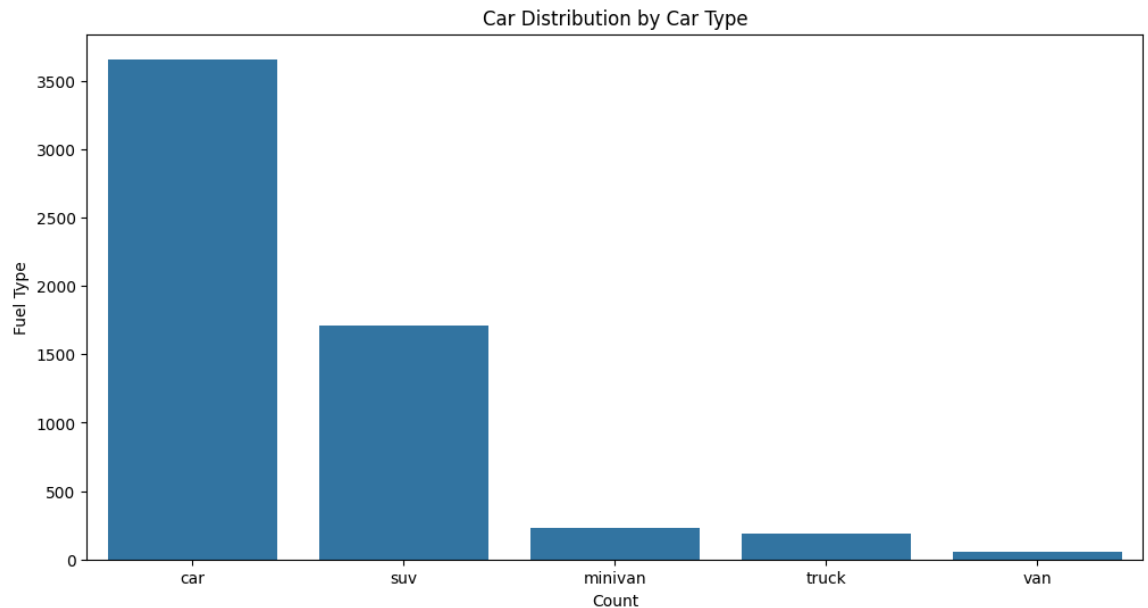

## Dataset Details:

- Dataset Name:  
Cornell Car Rental Dataset.
- Dataset description:  
The **Cornell Car Rental Dataset** is designed to analyze patterns and trends in car rental operations, providing comprehensive information about customer behavior, rental transactions, and vehicle inventory management.
- Dataset columns structure and types:  
Dataset Columns Description:  
  - fuelType** : Type of Fuel Used by Car.
  - rating** : Cumulative Ratings Given for the Car.
  - renterTripsTaken** : No. of total trips taken for the Car (period unknown).
  - reviewCount** : No. of reviews given for the Car.
  - location.city** : City Location of Car.
  - location.country** : Country Location of the Car.
  - location.latitude** : Latitude of Car's Location.
  - location.longitude** : Longitude of Car's Location.
  - location.state** : State in Which the Car is Located.
  - owner.id** : Owner's ID.
  - rate.daily** : the car rental cost per day (in U.S \$).
  - vehicle.make** : make of the car.
  - vehicle.model** : model of the car.
  - vehicle.type** : type of the car.
  - vehicle.year** : make year of the car.

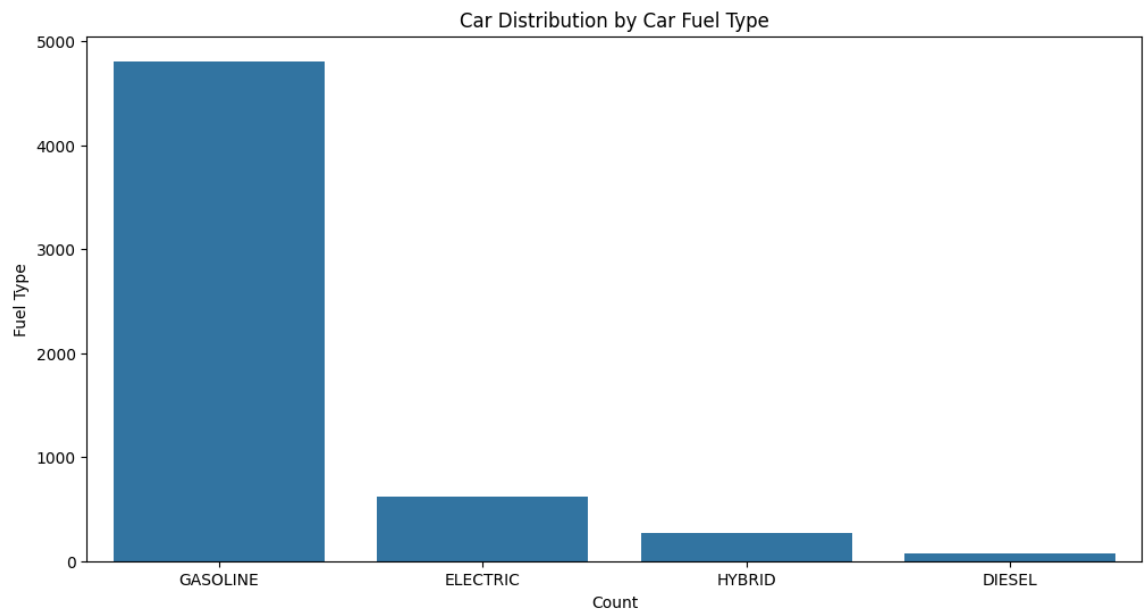

## Analysis Results & Findings:

### 1- Car Rental Analysis based on car type, model, make and year:

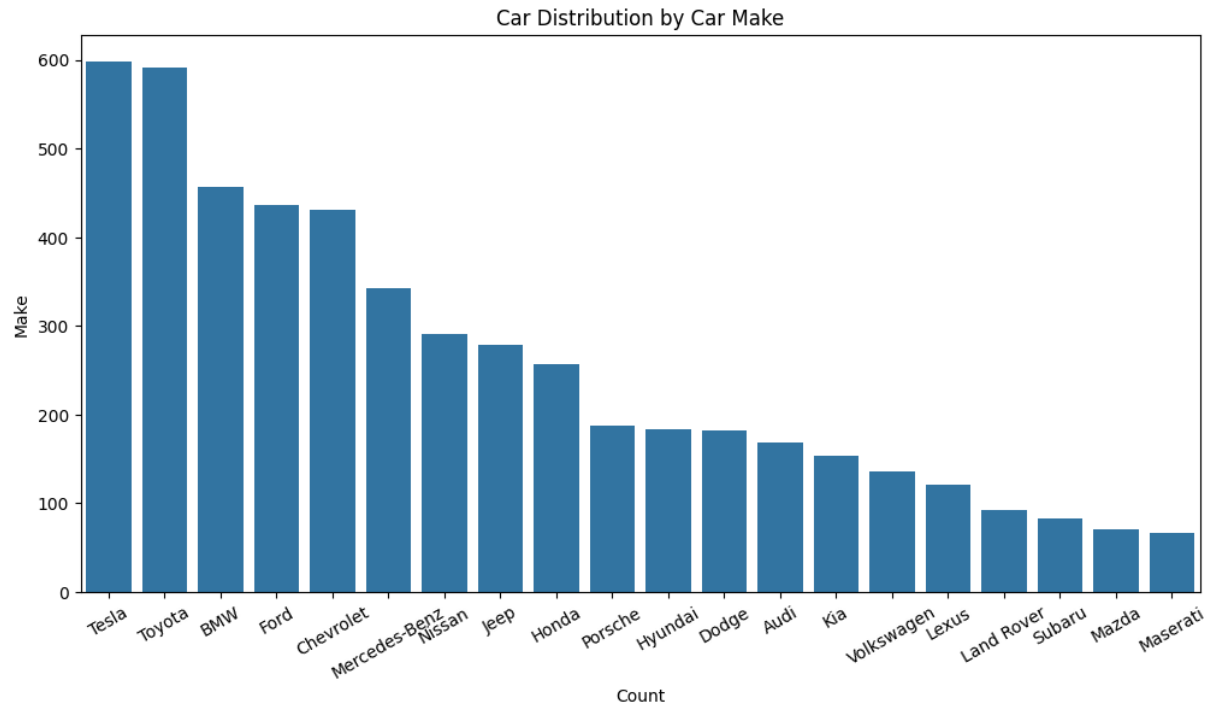

- a. The below image shows the distribution of the different car types. CAR type is the dominant type representing about 62.5% followed by the SUV type which represents about 29.3 %.

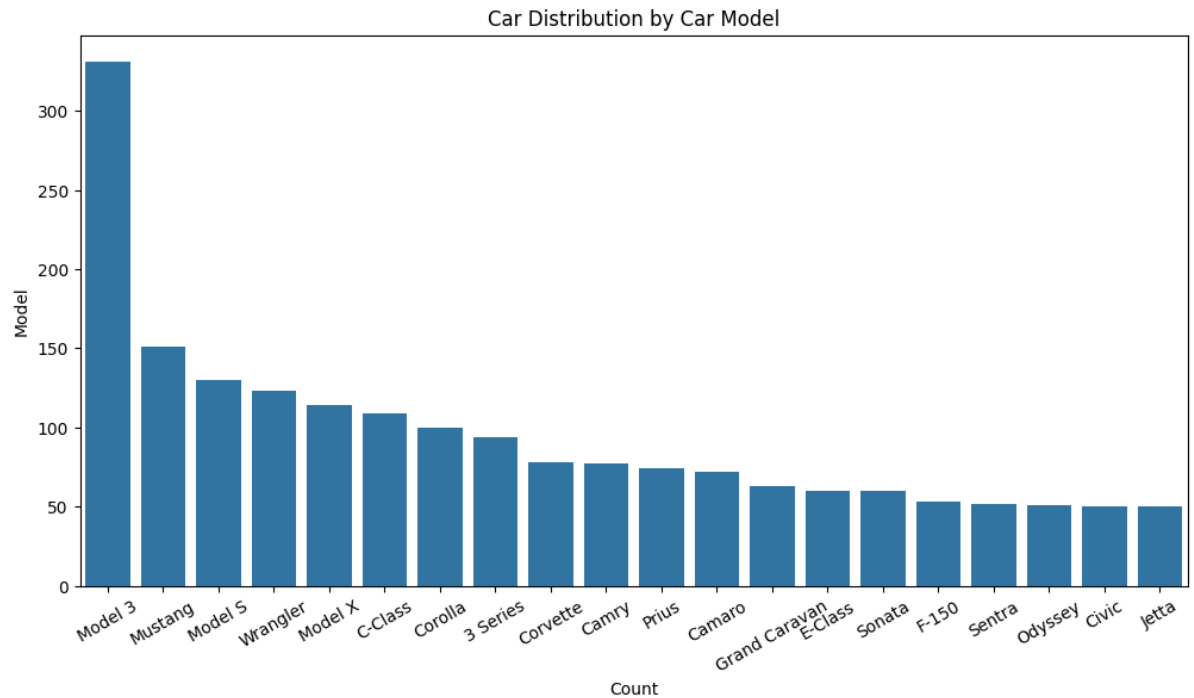

- b. As we can see from the below image, Gasoline cars are much more rented than the other car types.

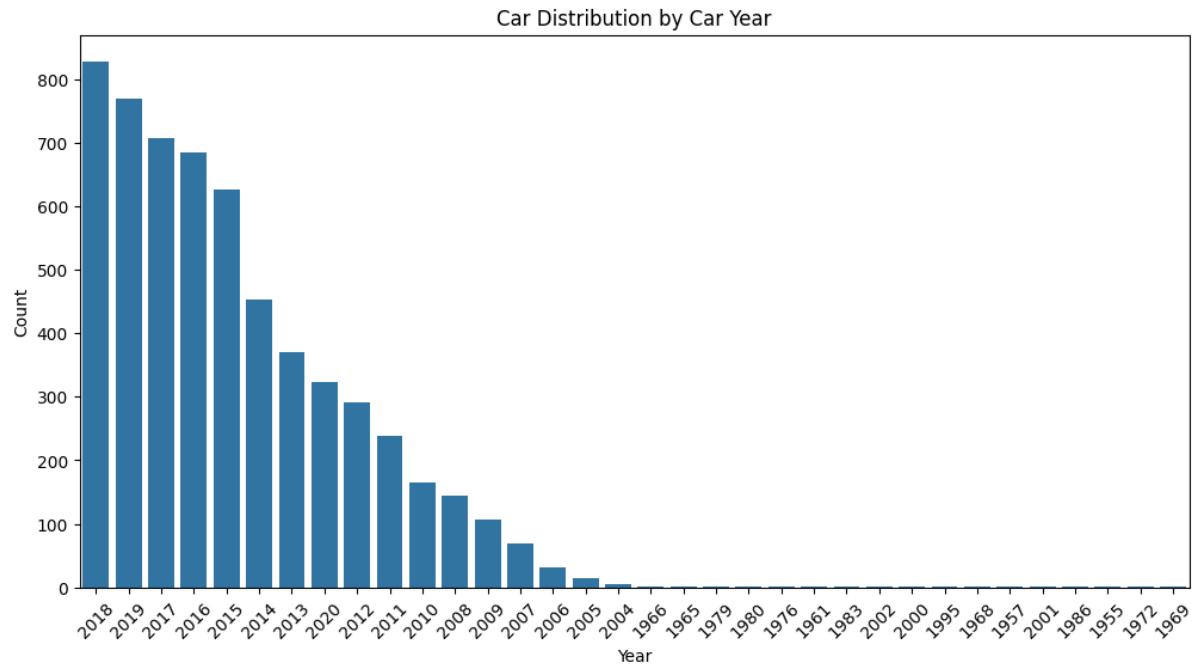

- c. The below image shows that the top 5 rented cars by make are Tesla, Toyota, BMW, Ford and Chevrolet.

- d. When it comes to car model, Tesla Model 3 is the most rented car.

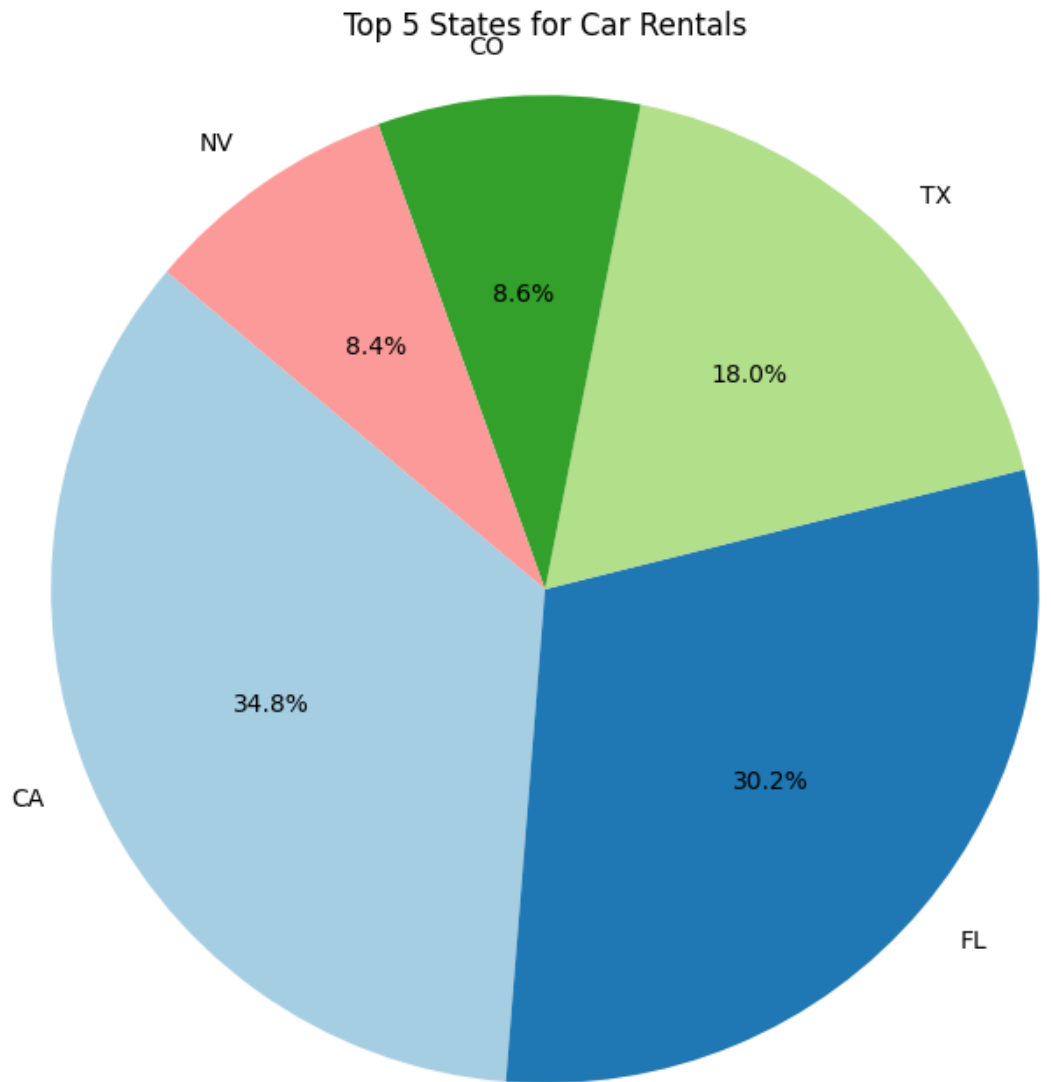

- e. It is also clear that people tend to rent new cars more than older cars.

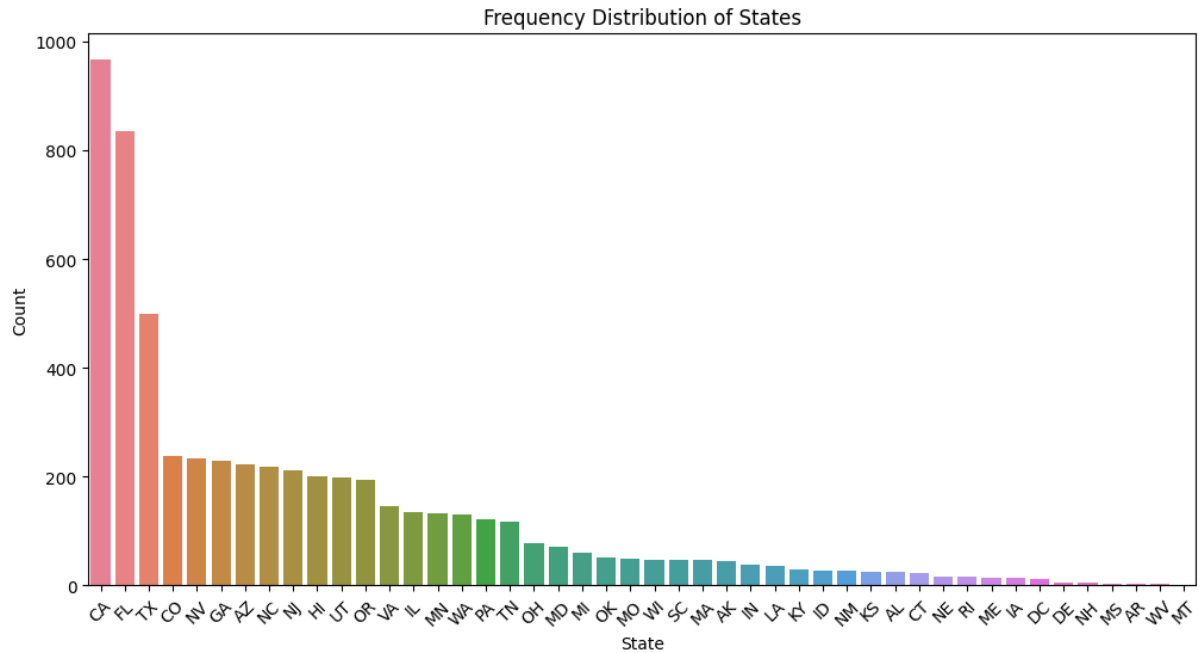

## 2- Car Rental Analysis based on Location:

- a. The below image shows the top 5 states for car rental. It very clear that California followed by Florida have the highest rental rates.

b. Here is a full picture showing the other states.

### 3- Car Rental Analysis based on Car Owners:

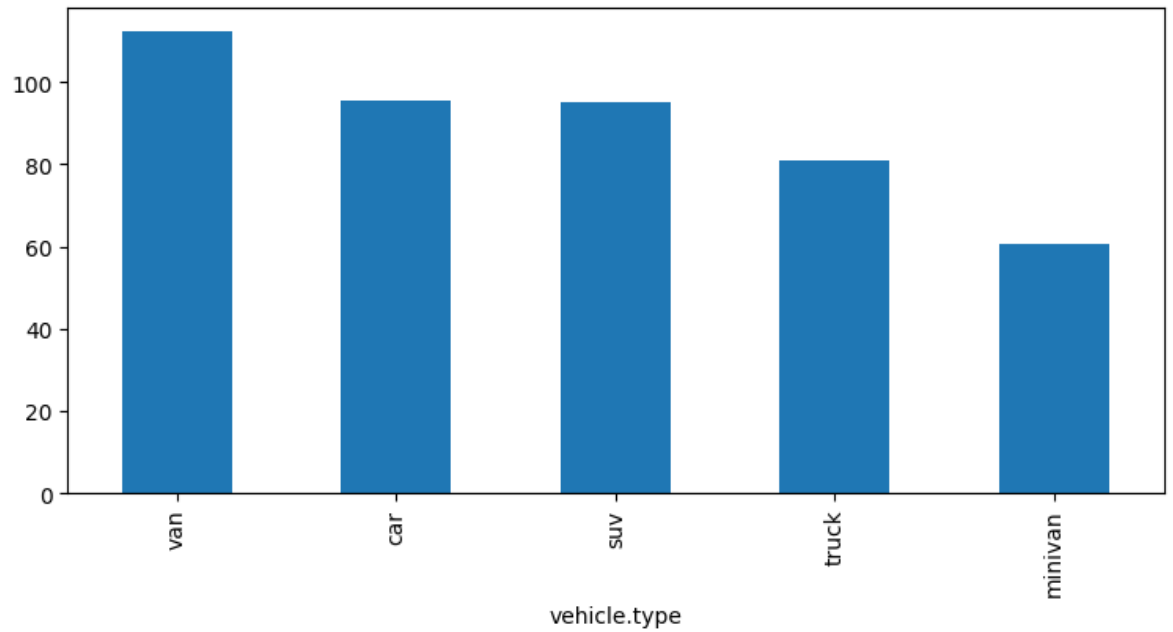

- a. The below stats show the top 5 car owners and how many cars each has.

Car Owner ID	Number of Cars
1300675	49
4009047	47
64265	40
2459011	38
1300139	33

### 4- Which car type is making the highest daily rate:

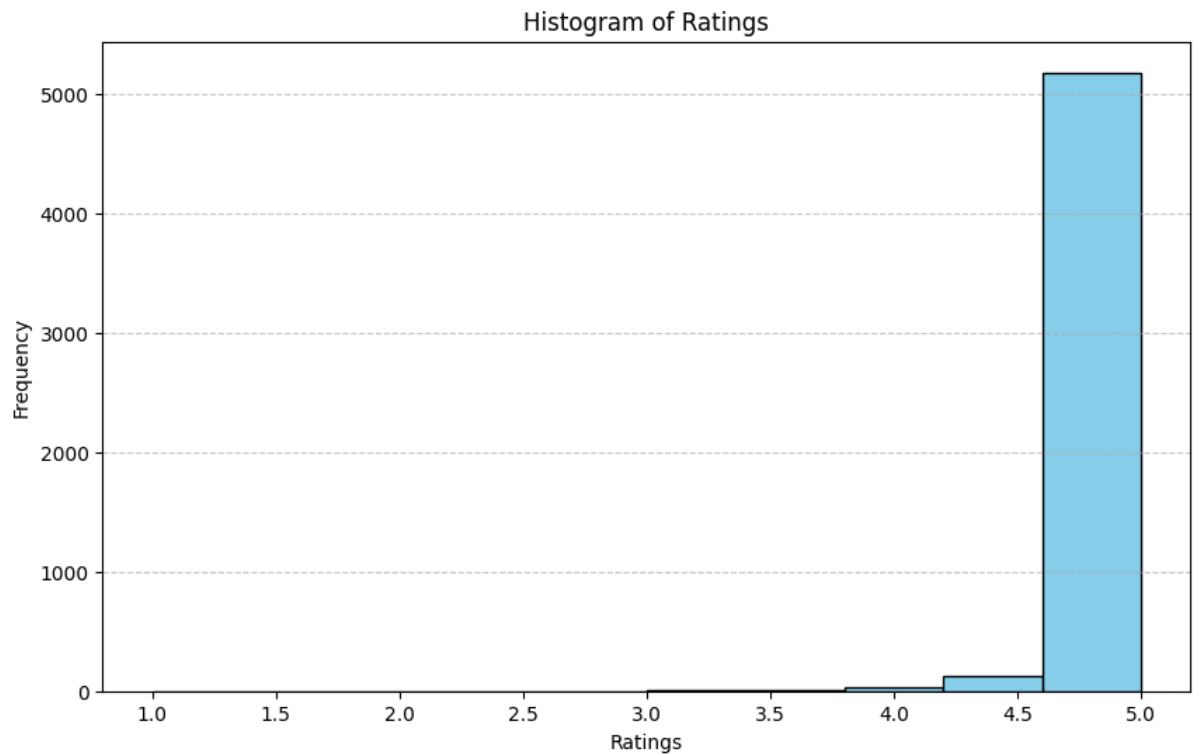

- a. The below image shows that Vans make the highest daily rate compared to the other car types.

**5- Car Rental Service Rating:**

- a. It seems that most people are happy with the rental service as the below image shows that most people gave high rating.

## Conclusion:

The above exploratory data analysis of the car rental dataset provided valuable insights into the patterns, trends, and relationships within the data. Key findings include:

1. **Demand on Car Type:** The analysis revealed that most customers tend to rent gasoline cars.
2. **Car Make & Model Preferences:** It was very clear that most customers preferred to rent Tesla & Toyota with new models.
3. **Geographical Insights:** California & Florida are the top states for car rentals.
4. **Customer Satisfaction:** the customers ratings indicate that they are very happy with the rental service.
